

Design, Development, and Deployment of ISO 23247 Standardized Digital Twin on Machines

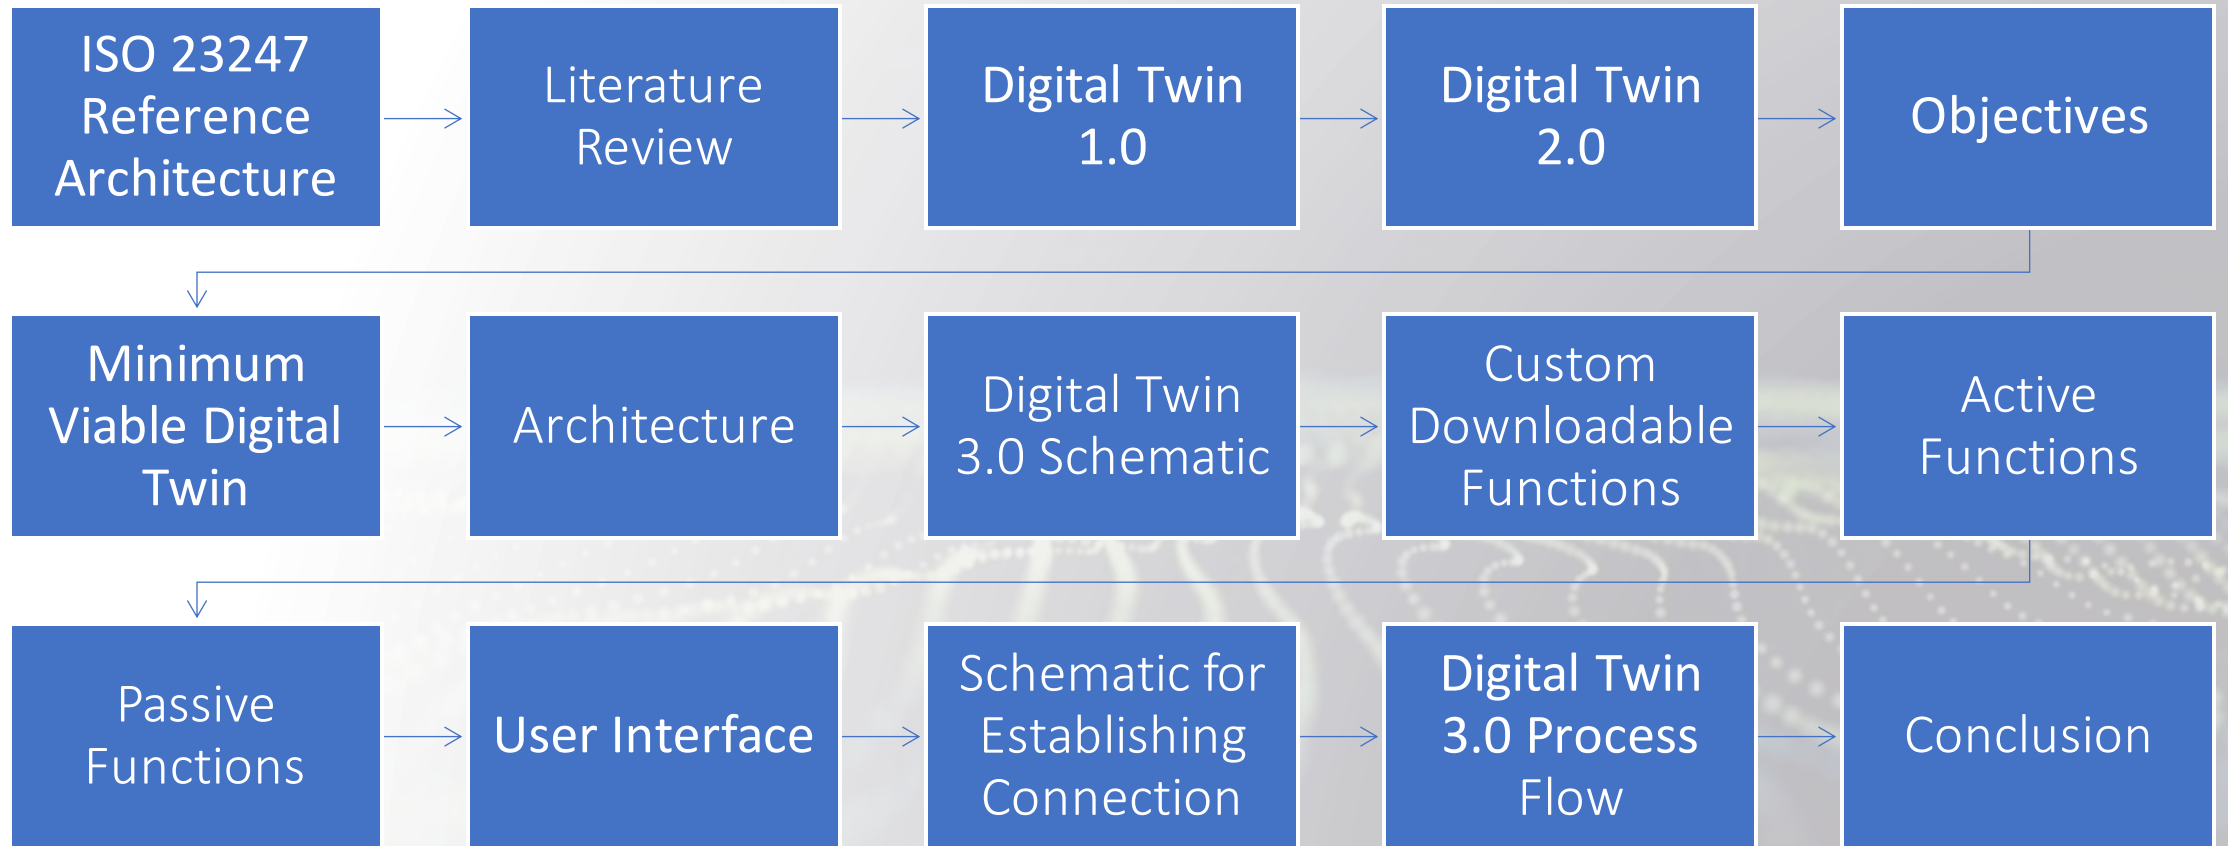

MASTERS THESIS PROJECT

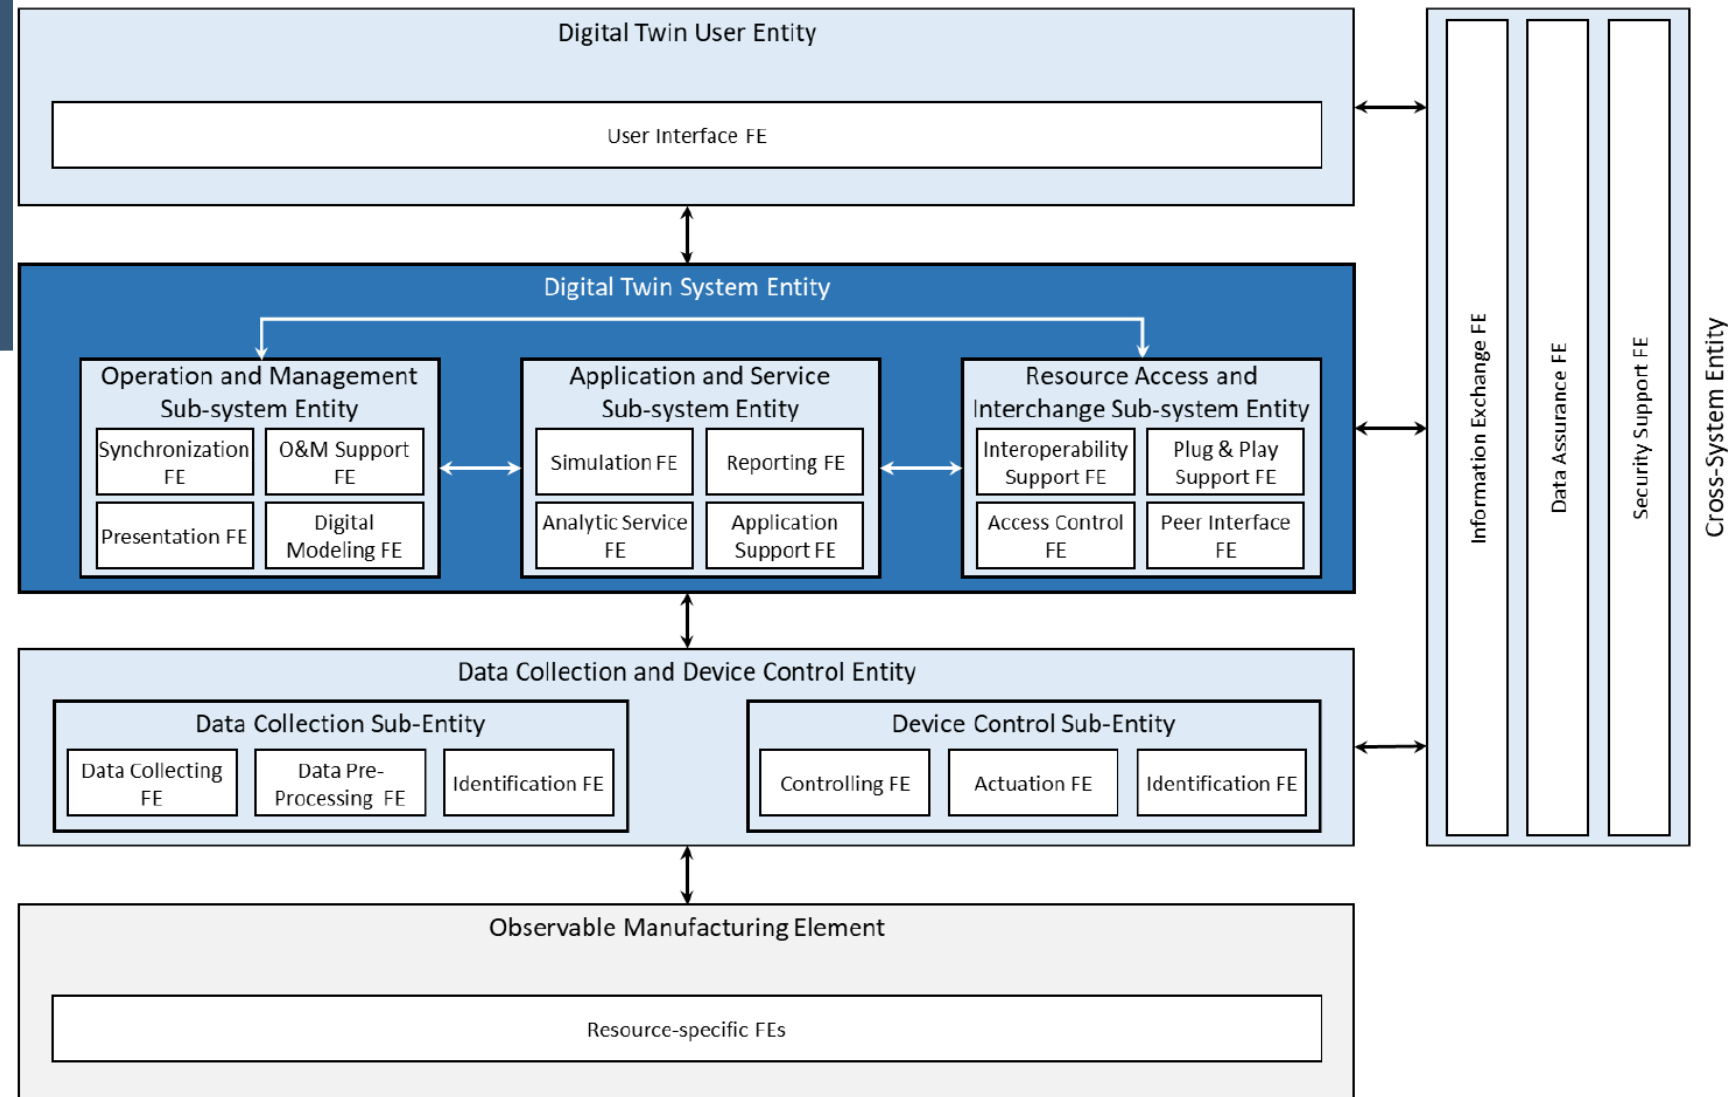

Presented By: Ashutosh Pathak

Guided By: Dr. Makarand S Kulkarni

OUTLINE

ISO 23247 Reference Architecture

Literature Review

Azure Digital Twin

- It serves as the cloud solution for IoT devices and querying on the platform can be performed using SQL
- It provides a real-time execution environment and twin graph functionality for visualization

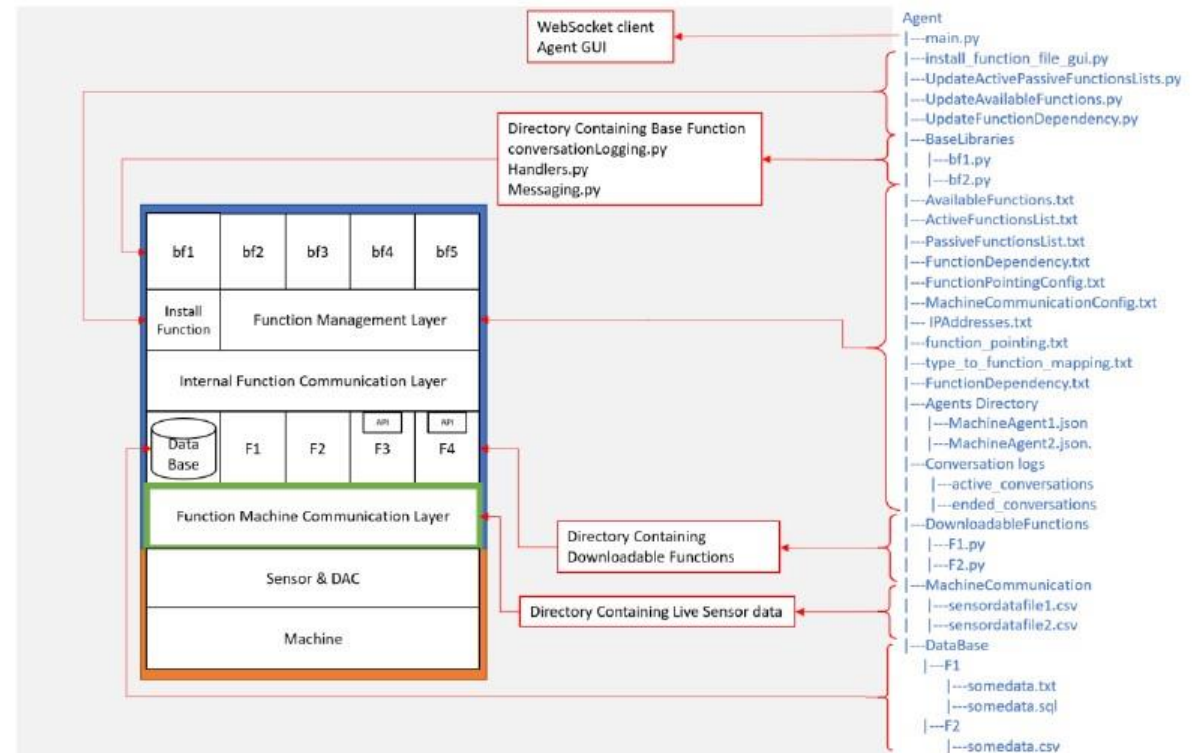

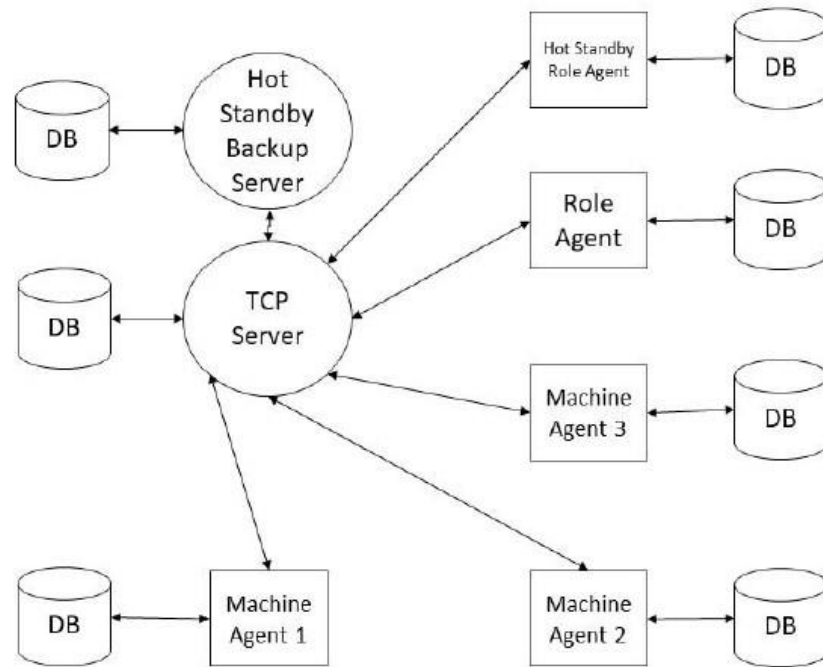

AWS IoT Twin Maker

- AWS IoT service enables the creation of operational digital twin models for both physical and digital systems
- These models are then connected to the corresponding devices using IoT technology, enabling the collection of data for analysis, visualization, and the implementation of various functionalities

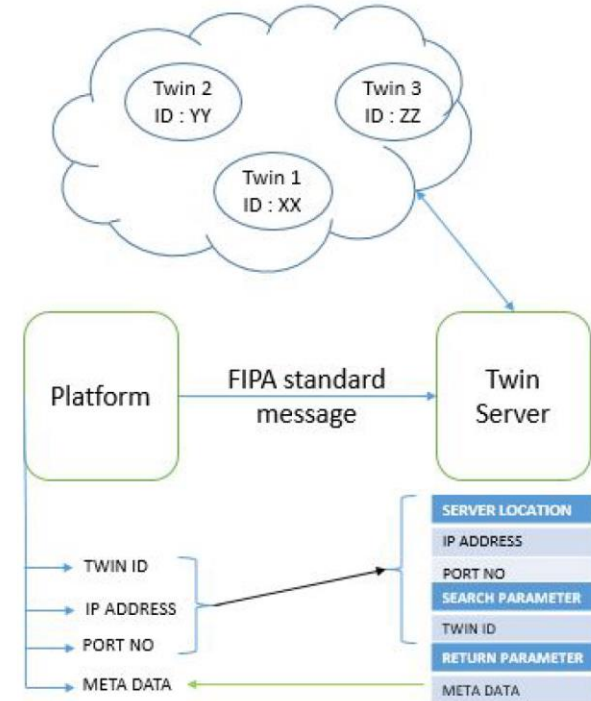

Siemens Digital Twins

- **Simcenter:** Simcenter provides advanced simulation capabilities, such as finite element analysis (FEA), computational fluid dynamics (CFD), and multi-body dynamics (MBD)
- **Mindsphere:** Mindsphere is Siemens' cloud-based IoT platform that integrates with digital twins. It collects real-time data from physical assets and systems, which is then used to update and enhance the digital twin models
- **Tecnomatix:** It focuses on digital manufacturing, production planning, and optimization

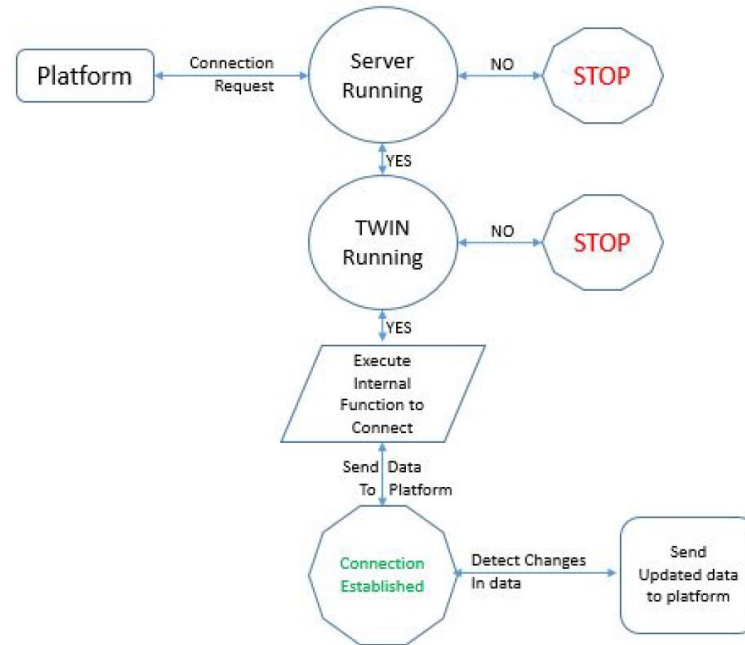

Digital Twin 1.0

Platform Overview

Twin Data					
Name : Vertoclemilling		Twin Id : 1001		Emergency : ON	
Floor No.	Power Status	Machine Status		Program Cycle	
10	OFF	Free		Not started	
MaxTravel(X)	MaxTravel(Y)	MaxTravel(Z)	WCSOffset(X)	WCSOffset(Y)	WCSOffset(Z)
20	20	20	100	80	10

Tool Details	Spindle Details	Coolant Details
Id :2 Material :Ceramic Shank dia :15 Tool dia :7 Overall Lenght :18 Cutting Lenght :18 Usage :Milling	Id :1 Moter Model :GDF80-24Z/1.5 Power(kW) :1.5 Voltage(V) :220 Maximum RPM :24000	Id :1 Coolant Name : Bechem Avantin 361 CS Materials used : S.S, Ti Cu and Al alloys Flash point :>120

Twin Data Display

Digital Twin 2.0

Flow of Querying Services

Objectives

Establishing concept for ISO 23247 standardized Digital Twin based on earlier versions of Twin

Establishing an Architecture for physical installation of standardized Digital Twin

Developing a user interface for the initialization of the Server and other Agents to facilitate the deployment of the Twin

Establishing framework for development, installation, initialization and deletion of downloadable custom function through User Interface

Developing Application and Service Sub-system Entity with active and passive functions for Machine and Tool Condition monitoring, report generation and alarm generation

Minimum Viable Digital Twin

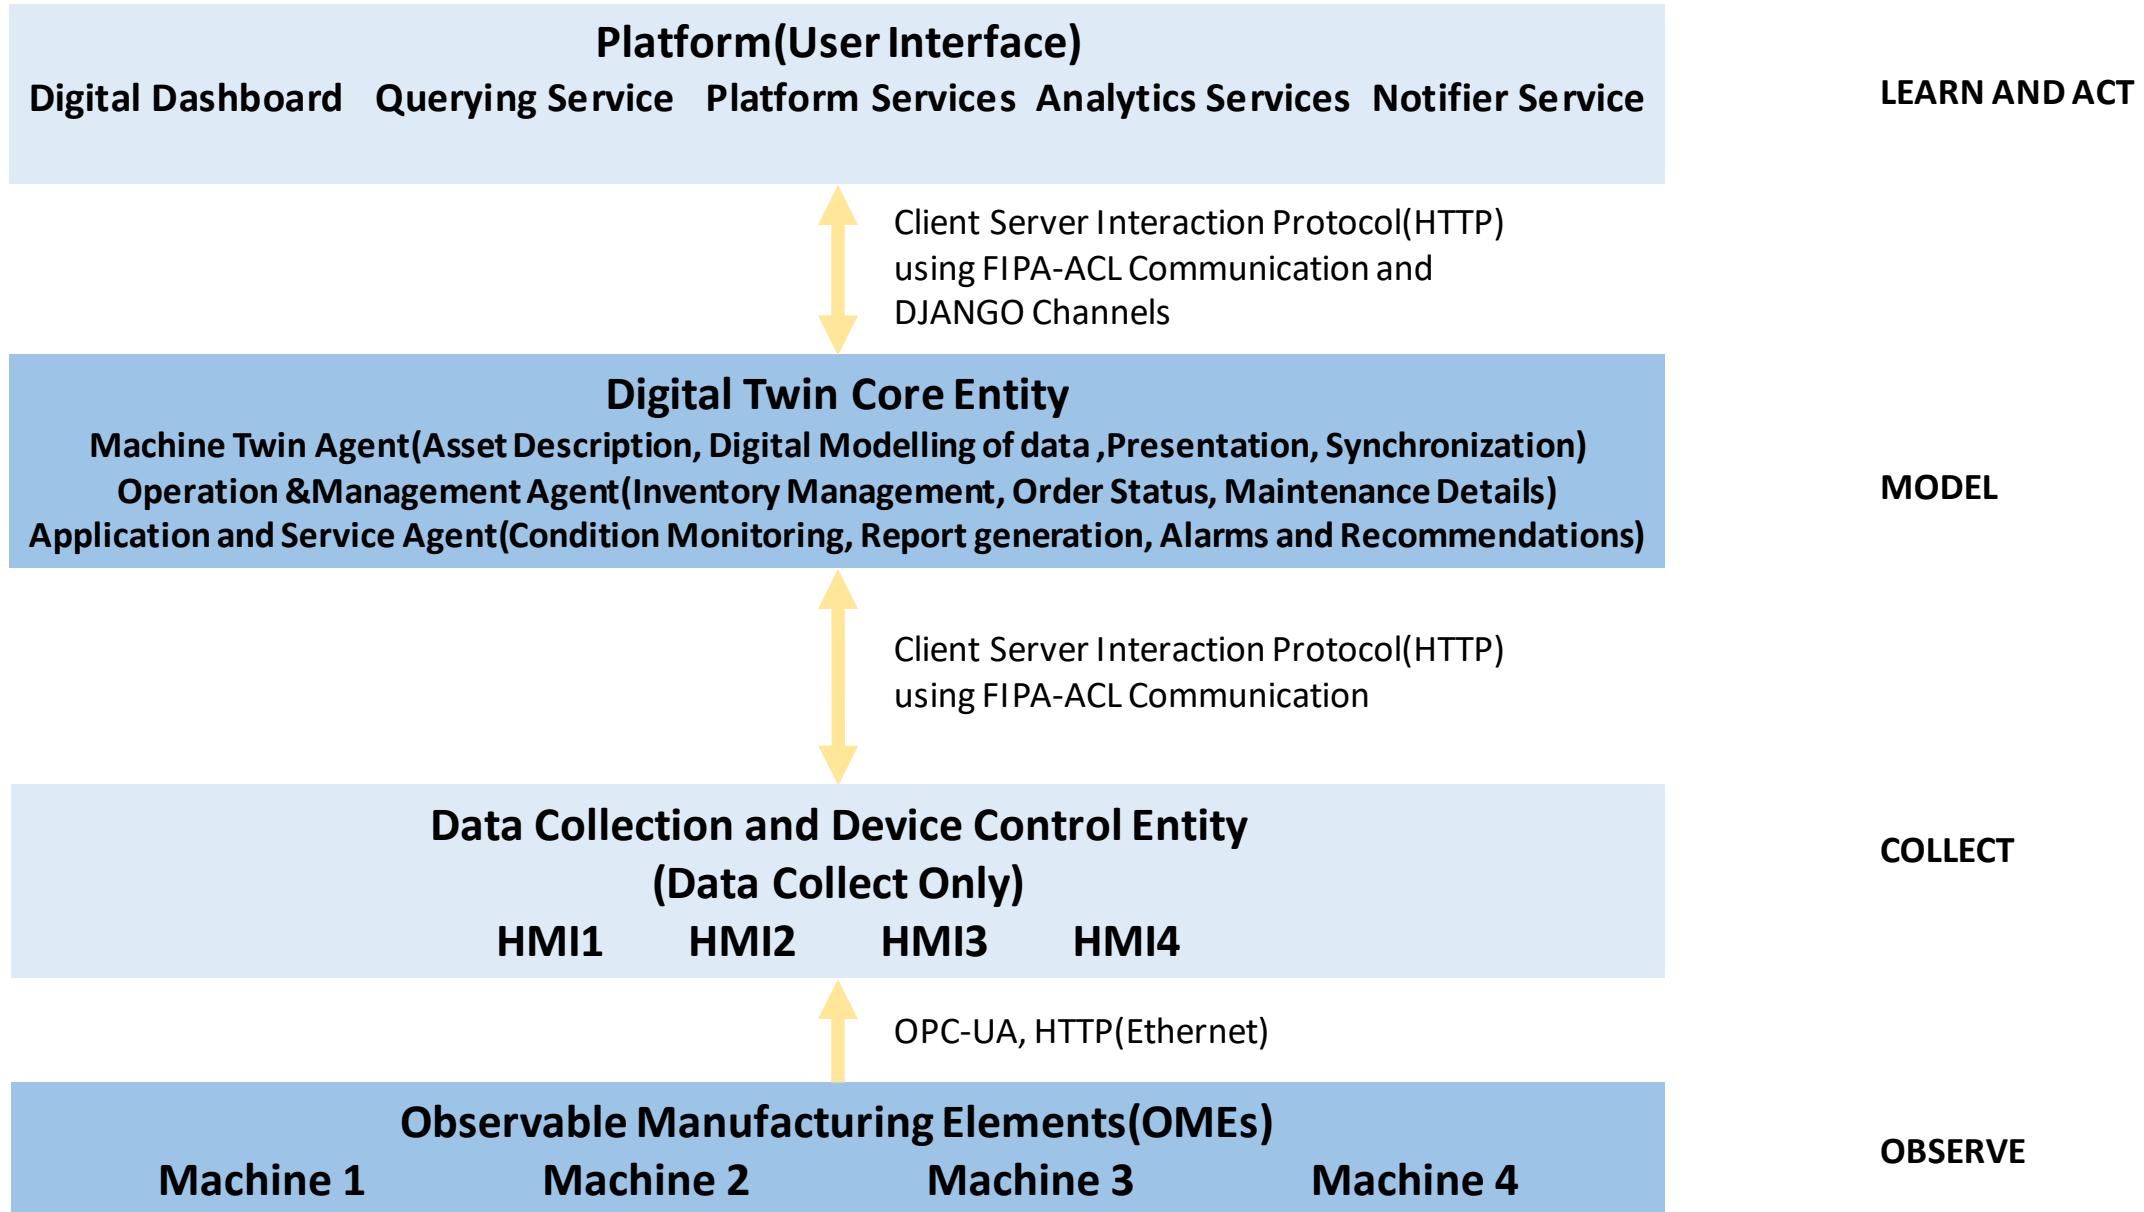

Digital Twin Standard Modules

- Asset Description
- Monitoring
- Communication
- Visualization
- DT Management

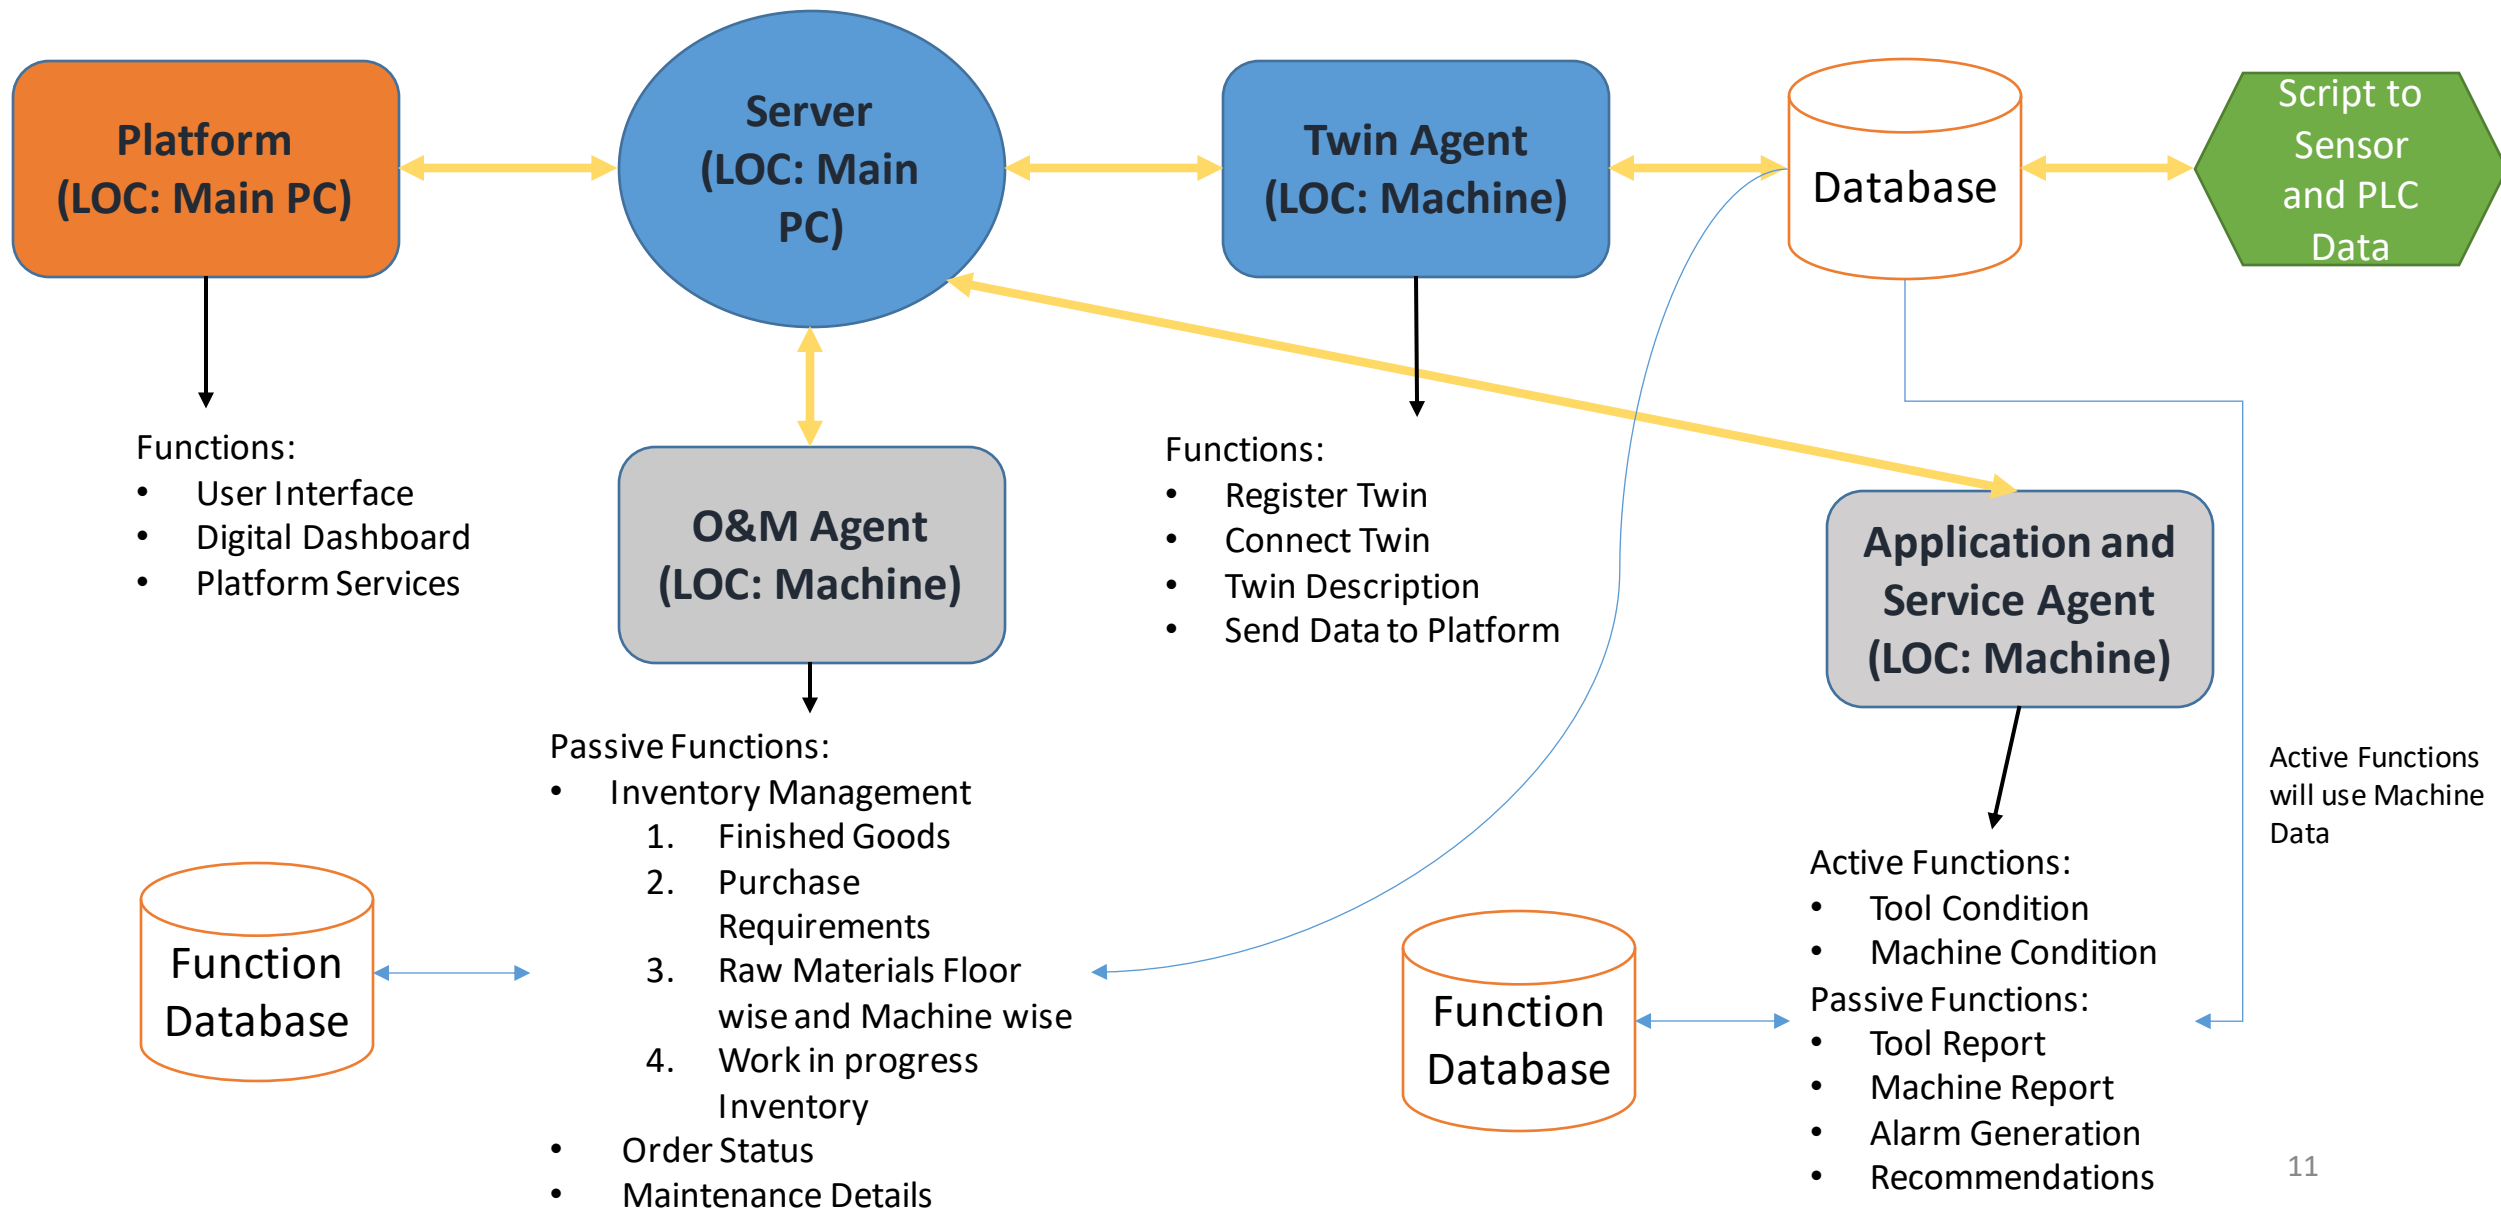

Digital Twin Role

- Respond
- Display
- Alarms
- Recommendations

Custom Downloadable Functions

Active Function Architecture

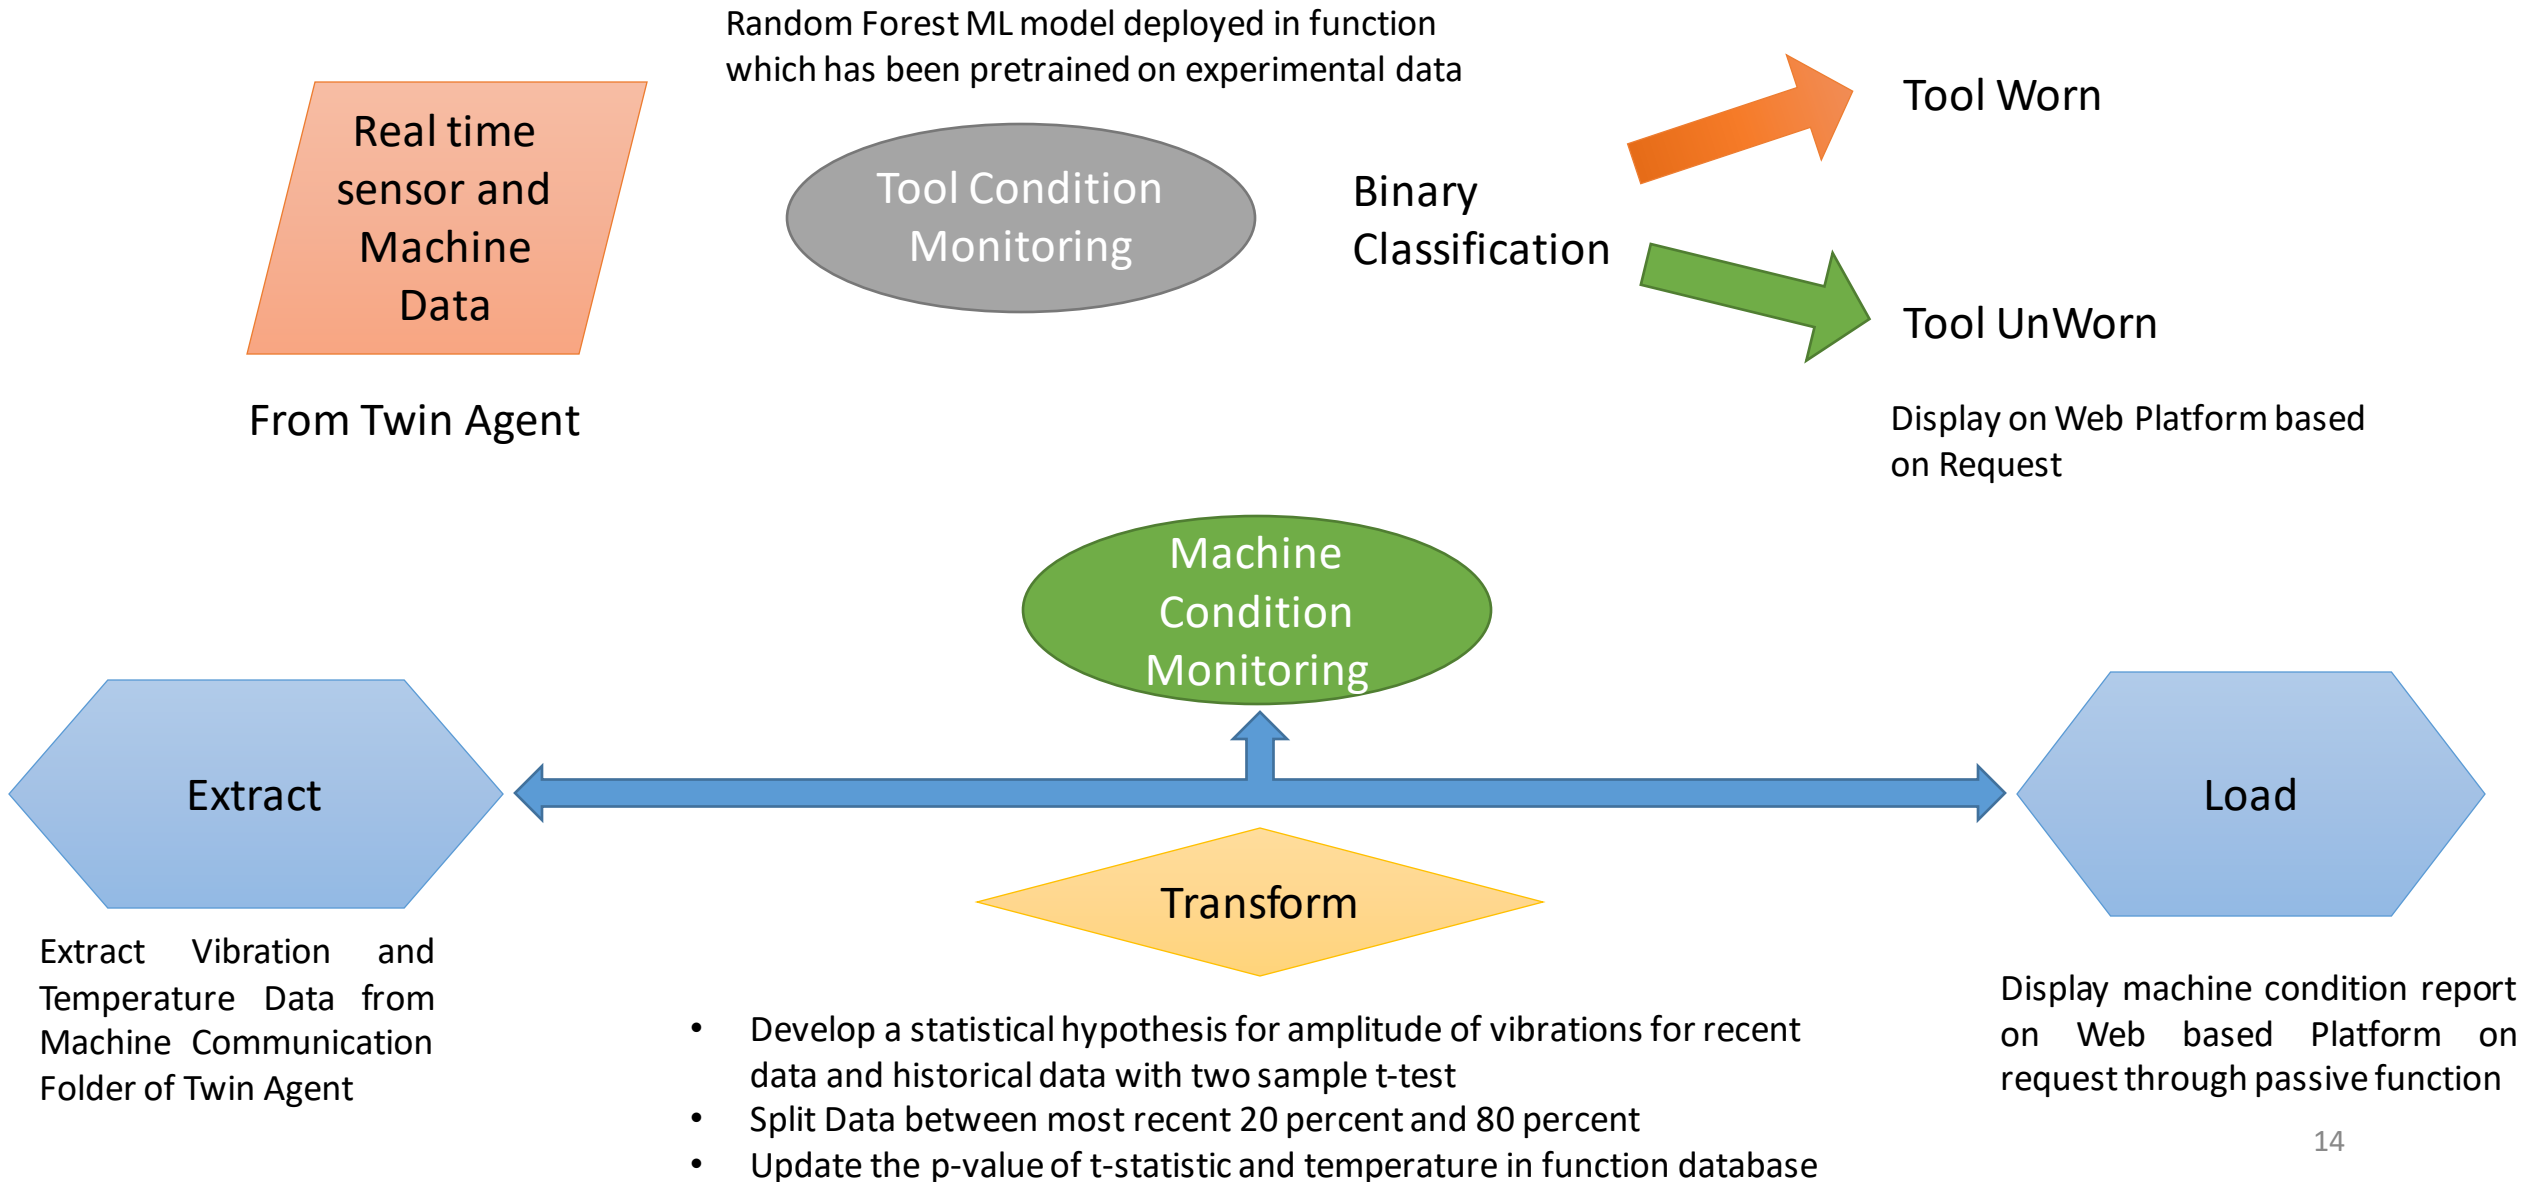

```
some_active_function=>0
analytic_machine_condition=>0
analytic_tool_condition=>0
```

The screenshot shows a code editor window titled "ActiveFunctionsList". The editor has a menu bar with "File", "Edit", and "View". The code content is as follows:

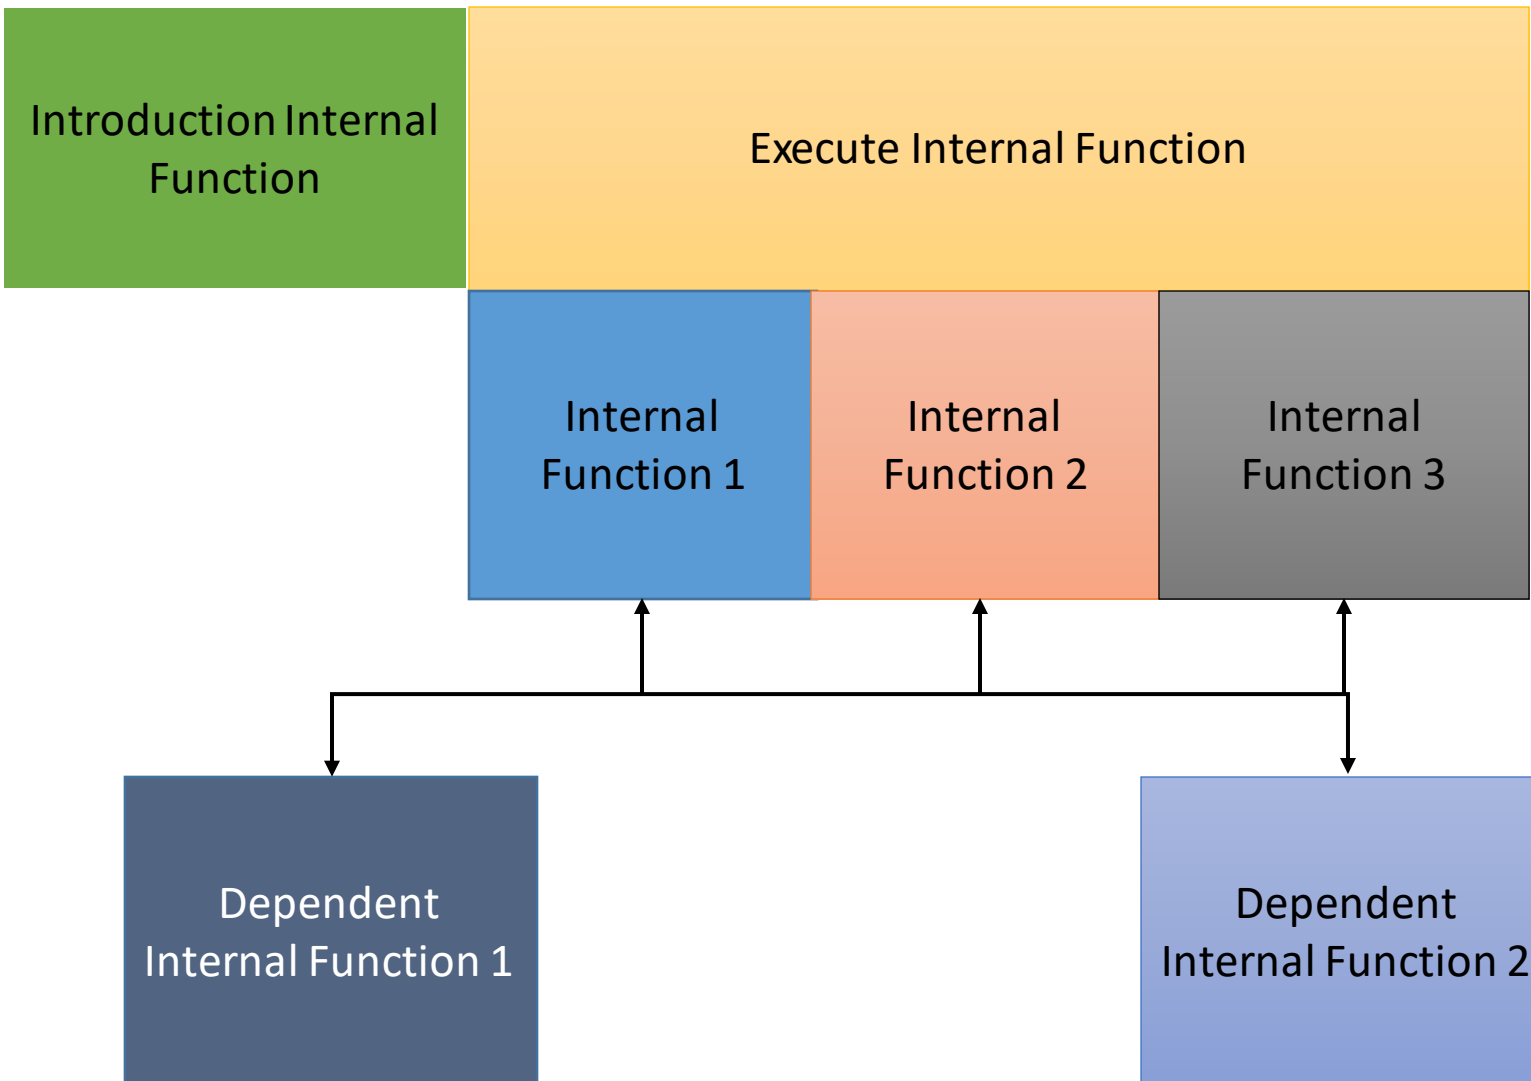

```
some_active_function=>0
analytic_machine_condition=>0
analytic_tool_condition=>0
```

The status bar at the bottom indicates "Ln 1, Col 1", "100%", "Windows (CRLF)", and "UTF-8".

Machine and Tool Condition Monitoring

Passive Function Architecture

```

Conclusion

- **Digital Twin Roles:**
 - Digital twin developed **respond** to the query generated from user interface
 - Digital twin **displays** the data collected on a digital dashboard on platform graphically
 - We have integrated **alarms** also in our twin
 - Twin also shows **recommendations**

Conclusion

- **Digital Twin Modules:**

- **Asset Description** in our digital twin has been incorporated as we display twin data which **describes twin id, name, machine limits**, etc.
- Digital Twin 3.0 also **supports real time monitoring** as data collected is displayed on platform simultaneously
- **FIPA-ACL based communication protocols** has been utilized which enables interaction and transfer of data
- Data collected in digital twin is **presented in a graphical and dynamic boxes**
- **Digital Twin management** is also incorporated by providing **install and delete functionalities** in UI
